# Windows checklist

*If you suspect (or the readme tells you) that malware is running on the machine, then run a virus scan. (malwarebytes) All the checks below can be found in the manual (located at the front of your team's booklet from beginning to the bookmark marked "ubuntu")*
*Note! Windows updating can be risky, it's worth doing it at the beginning where it matters less if it breaks.*

☐ *Update system & software*

*General:*

☐ Read over the Readme, especially the competition scenario and critical services

☐ Forensic questions ***(Be mindful that forensic questions might require files, users, or programs!)***

☐ Remove non work-related files

*Control Panel:*

☐ User management

- ☐ Add or remove users *(Based on Readme User list)*
- ☐ Remove or add administrator role to users
- ☐ Change unsecure user passwords *(excluding your own)*

☐ Enable firewall

☐ Remove unwanted software

☐ Set UAC *(User Account Control)* slider to max

☐ Disable remote assistance and remote desktop *(Control Panel > System and Security > System > System Properties > Remote)*

☐ Disable AutoPlay *(Control Panel > Hardware and Sound > AutoPlay)*

*Computer Management:*

☐ Create groups and add users to them *(Optional, if Readme specifies)*

*Services:*

☐ Enable critical service(s) and disable unneeded ones *("Workstation" service is SMB)*

*Group Policy:*

☐ Set sane Group Policy *(Password/Account policy)* entries

*Local Security Policy:*

☐ Set sane Local Security Policy values

*Virus & Security:*

☐ Enable Windows Defender

☐ Check for Backdoors

- ☐ *(administrator)* `netstat -anbo`
- ☐ Task Manager "Startup" tab

☐ Check the Registry program for backdoors

- ☐ HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\Run
- ☐ HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Run

☐ Virus scan *(If you have time)*

*Misc:*

☐ Check & apply miscellaneous security options from the "Pam & General Security" section of the manual

# Linux (Ubuntu/Mint/Debian) checklist

*This checklist is a general overview of what to do in a sane order.*
*All the checks below can be found in the manual (located at the front of your team's booklet from beginning to the bookmark marked "ubuntu")*

*General:*

☐ Read over the Readme, especially the competition scenario and critical services

☐ Forensic questions ***(Be mindful that forensic questions might require files, users or programs!)***

☐ Remove non work-related files

*System Settings/Preferences:*

☐ User management

☐ Add or remove users *(Based on Readme User list)*

☐ Change account types *(Based on Readme User list)*

☐ Change unsecure user passwords *(excluding your own)*

*Software & Updates:*

☐ The system checks for updates daily

*Terminal:*

☐ Create groups and add users to them *(Optional, if Readme specifies)*

☐ Enable firewall *(sudo ufw enable)*

☐ Remove unwanted software *(sudo apt-get remove …)*

*Services:*

☐ Enable critical service(s) and disable uneeded ones *(sudo systemctl start/stop … )*

*SSH (If in "critical services"):*

☐ Make sure service is running

☐ Secure /etc/ssh/sshd_config

*Virus & Security:*

☐ *(LUNCH!) Update system (sudo apt-get update …) & (sudo apt-get upgrade …)*

☐ Check for Backdoors

☐ Check for backdoors using netstat *( netstat -tulpn )*

☐ Check for malicious Cron jobs

*Pam & Security:*

☐ Check & apply miscellaneous security options from the "Pam & General Security" section of the manual *(Ought to do this one last since it carries a non-zero chance of bricking stuff!)*

# Windows Server checklist

*If you suspect (or the readme tells you) that malware is running on the machine, then run a virus scan. (malwarebytes) All the checks below can be found in the manual (located at the front of your team's booklet from beginning to the bookmark marked "ubuntu") Note! Windows updating can be risky, it's worth doing it at the beginning where it matters less if it breaks.*

☐ *Update system & software*

*General:*

☐ Read over the Readme, especially the competition scenario and critical services

☐ Forensic questions ***(Be mindful that forensic questions might require files, users, or programs!)***

☐ Remove non work-related files

*Control Panel:*

☐ User management

☐ Add or remove users *(Based on Readme User list)*

☐ Remove or add administrator role to users

☐ Change unsecure user passwords *(excluding your own)*

☐ Enable firewall

☐ Remove unwanted software

☐ Set UAC *(User Account Control)* slider to max

☐ Disable remote assistance and remote desktop *(Control Panel > System and Security > System > System Properties > Remote)*

☐ Disable AutoPlay *(Control Panel > Hardware and Sound > AutoPlay)*

*Server Management:*

☐ Check "inetmgr" for forensic questions, Readme might also ask about servers through here *(Optional)*

*Computer Management:*

☐ Create groups and add users to them *(Optional, if Readme specifies)*

*Services:*

☐ Enable critical service(s) and disable unneeded ones *("Workstation" service is SMB)*

*Group Policy:*

☐ Set sane Group Policy *(Password/Account policy)* entries

*Local Security Policy:*

☐ Set sane Local Security Policy values

*Virus & Security:*

☐ Enable Windows Defender

☐ Check for Backdoors *(administrator)* `netstat -anbo`

☐ Task Manager "Startup" tab

☐ Check the Registry program for backdoors

☐ HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\Run

☐ HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Run

☐ Virus scan *(If you have time)*

*Misc:*

☐ Check & apply miscellaneous security options from the "Pam & General Security" section of the manual

# Cisco Packet Tracer checklist

*This checklist is a general overview of what to do in a sane order. If you suspect (or the readme tells you) that malware is running on the machine, then run a virus scan. (malwarebytes)*
*All the checks below can be found in the manual (located at the front of your team's booklet from beginning to the bookmark marked "ubuntu")*

*General:*

- ☐ Team's competition timer is running and counting down
- ☐ Cisco Packet Tracer is signed-in, up and running and ready to use

*Qustions:*

- ☐ Cisco Packet Tracer quiz

*Virtual Machines:*

- ☐ *(If Available)* Cisco Packet Tracer virtual machine scenario

*The virtual machine scenario(s) should have instructions on the left-side of the Cisco Packet Tracet window for how to do the scenario.*
